

*Affordable, risk assessment & **continuous monitoring** for your SaaS ecosystem.*

Overview

SaaS Security Score empowers security teams, CISO offices, and IT leaders to continuously assess, benchmark, and remediate security posture across all SaaS applications. Gain insight into adoption risk, security gaps, and compliance exposures and turn that into prioritized action.

Core Features

- Governance & compliance of all SaaS apps in your organisation
- Risk scoring engine (implemented process and spend analysis)
- Trend tracking and historical comparison
- Spend inventory and renewal tracking
- Incident management for SaaS
- Sovereignty data management
- Threat intelligence enrichment
- Alerts & notification engine for critical changes
- Exportable dashboards & reports (PDF, CSV)

Key Benefits

Continuous visibility

Assess security posture of all SaaS apps **automatically** and in **real time**.

Risk prioritization

Identify highest-risk applications and misconfigurations **first**.

Benchmark performance

Compare your **score** against peers or industry standards.

Actionable insights

Get **prioritized recommendations**, not just alerts.

Audit-ready reporting

Generate executive **dashboards** and compliance **reports**.

Use Cases

Enterprises & Mid-Market

Gain a unified security score across all SaaS investments.

Security Operations, CISOs & Providers

Monitor drift, flag high-risk configurations, and extend these capabilities through MSP assessments.

Audit & Compliance

Support frameworks like ISO 27001, GDPR, and SOC 2 with continuous control monitoring.
